

```
int fib(int n) {
    if (n <= 1) {
        return n;
    }
    return fib(n - 2) + fib(n - 1);
}
```

```
int main() {
    fib(7);
    return 0;
}
```

excessive recursion, $O(n) = 2^n$ (roughly)
